

Symtech Innovations Ltd. is proud to announce that we have been awarded the contract for the management and support of the facilities management network for the **KPMG Office Tower**, the first office building of the Vaughan Corporate Centre.

The network and communications system is comprised of a multi tiered architecture that supports a 365,000 square foot 15-storey office tower that is connected to a two-storey retail podium. The network will allow **Smart REIT** to integrate all of their building systems from lighting controls to the monitoring of their BAS, fire panels, life safety and alarms as well as electrical metering, EPS (emergency power) and other various systems that ensures the operation of their facility runs smooth and efficient. This will also allow quick response for any break-fix requirements and/or management of the preventative maintenance programs of these systems.

Symtech looks forward to working with Smart REIT to deliver high quality network solutions and management for the prestigious smart buildings being developed by SMART REIT.
