

43 – 45 KING ST.

Symtech Innovations Ltd. announces that it is currently working with the design team on future construction of the city's latest multi-residential project.

The project will consist of 2 – 30 storey towers with 3 levels of underground parking, several ground level retail units and 4 levels of shared podium with convenient amenities. Both towers will house a total of 580 new residential units.

Symtech will provide design-assistance along with the valuable experience on implementing cost saving measures from concept and design through to construction of the project. Our involvement and responsibility will encompass the electrical and communications infrastructure of the buildings connected essentially as one entity.

We look forward to the successful implementation of this project and being a part of the redevelopment of Hamilton's downtown core.
