

We are pleased to announce that we have been awarded the Electrical contract for McKesson's Technology Solutions Facility in the city of Mississauga. Located on 23 acres within the Meadowvale Business Park, McKesson's unparalleled facility will serve as a hub of health care innovation.

Working alongside our partners – Norr and mForm, we can transform this 3-storey, 250,000 sqft facility to help support McKesson's ambitious vision, growth, and commitment to supporting customers worldwide.

Symtech is excited to work with the project and design team to achieve McKesson's energy efficient targets. We are installing motion-controlled light fixtures that were built at the highest specifications reducing the amount of energy needed to support productive operations.

Symtech will complete the demolition and new tenant fit out of the existing space to allow for newer, state-of-the-art amenities, such as unique collaborative areas, on-site cafeteria, open-air atrium, and impressive loading facilities. Symtech will be responsible for all the Electrical scope of work – planning, procuring, executing, and commissioning all electrical systems, lighting protection, distribution, emergency power systems, and security systems.
