

The Well

Symtech is pleased to announce it has been awarded the Design Assist Electrical contract at The Well.

The Well is a development project unlike any other. Breaking ground in 2017, this trailblazing project promises a new standard for Toronto living. A new community in the heart of Toronto -- distinct, dynamic, radiating, and brilliant urban design. Two million sq. ft. of mixed-use space will be built and revitalized on a scale never seen before.

The Well will feature seven buildings -- both commercial and residential -- including over 1,500 residential units, which will come in a mix of typologies.

Fronted by red brick cladding on the lower levels, a trio of terraced buildings will meet the lower scale of Wellington Street, while high-rises will face CityPlace and the rail tracks to the south. Three new north-south pedestrian lanes will be created to provide greater permeability to the site, with retail integrated on four levels. The site will include 432,772 sq. ft. of new retail space, including a showpiece Market Hall and a culinary school.

Symtech will be responsible for all electrical systems such as power distribution, emergency power, highly efficient lighting, lighting controls, fire alarms, security systems, and network systems.
